

Advanced Copper Foil Announces EV Battery Copper Foil Supply Facility in Ontario Canada

Advanced Copper is pleased to announce the expansion of its Copper Foil manufacturing facility in Mississauga Ontario to include a full-service model to supply the Electric Vehicle Battery Manufacturing segment with Copper Foils specifically designed for this emerging Market.

Advanced Copper Foil Battery Foils are ideal for large-size and high-power batteries as required by today's Electric Vehicle Market, Grid Battery Systems and Power Tool Appliances. The ultra-low profile makes our copper foils suitable for Lithium-ion batteries where a graphitic carbon layer is bonded to the copper in order to form the current collector. The high-elongation and tensile properties accommodate batteries where stress-relief is required during the winding of the electrode.
